## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 74 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hiekali(5,619,500).

With regards to claim 74 Hiekali teaches a switch(Fig. 3@302-1, ATM gateway) having a plurality of ports for routing received frames between multiple attaches devices comprising: a first port supporting a first link speed(Fig. 3, voice over T1/E1 link), a second port supporting a second link speed, the second link speed different from the first port link speed(Fig. 3, first Nx56/64 KBIT/S link), a third port supporting a third link speed, the third link speed is the same as either the first port or the second port link speed(Fig. 3, second Nx56/64 KBT/S link same as the second port), a connectivity apparatus coupled to the first port and second port for selective interconnection there-between(Fig. 3302-1, ATM gateway, see col. 3 lines 19-24), the connectivity apparatus transferring frames using a

constant number of signals and a constant clock rate having the same values between any two ports(since the first port and the third port can have the same link speed, it is inherent that they can exchange data using a constant number of signals and a constant clock rate since the signals rates are the same. Fig. 3 the gateway can provide local switching without translation between similar protocols, .i.e frame relay to frame relay).

Although Hiekali does not include the fibre channel frames as one of the protocol standards, it would have been obvious to one of ordinary skill in the art to consider transmitting fibre channel frames over an ATM gateway. The motivation being to enable the transmission of these frame via an ATM gateway switch.

***Allowable Subject Matter***

Claims 66-73, 75-85 are allowed.
